Date Released: First Quarter 2010

New Home Market

Home Starts Strengthen in Fourth Quarter

Ontario residential construction activity strengthened for a second consecutive quarter and was running more in line with the underlying trend. Ontario all area home starts increased to a seasonally adjusted annualized rate of 57,100 units in the fourth quarter of 2009, up nearly 24 per cent

from the previous quarter. Housing starts were growing consistently through the course of last year after the onset of the global economic crisis in the fall of 2008 dampened consumer spending and housing demand. While all housing segments posted increases, single-detached home construction grew most in the fourth quarter. For the year, residential construction activity fell to its lowest level in over a decade. Northern and Eastern

CMHC SCHL
HOME TO CANADIANS

Ontario residential construction markets, led by Thunder Bay, Kingston, Peterborough and Ottawa fared relatively better. Alternatively, south central Ontario markets experienced weaker starts activity with Barrie, Oshawa, Hamilton and Toronto posting notable declines. While economic conditions have steadily improved, a slowing economy, tight credit conditions and higher inventories led to softer construction activity last year.

The share of single-detached home construction dropped to 41 per cent in 2008, its lowest level in over 30 years. That story began to reverse itself particularly during the second half of last year as single-detached starts captured 45 per cent of all construction activity in 2009. The rising cost of housing in recent years has triggered less spending on big ticket items – resulting in slowing demand for more expensive housing. This has coincided with a mild uptick in new single detached inventories. Builders have responded by launching fewer new projects since the fourth quarter of 2008. Record low interest rates and falling new home prices have improved affordability conditions, allowing demand for more expensive housing to grow in recent quarters. After peaking in the fourth quarter of 2008, single-detached inventories edged lower and remain below historical averages. This prompted more builders to commence residential construction activity in the fourth quarter. Although anecdotal, more construction of single-detached housing into the latter part of last year may also have been motivated by the upcoming introduction of the HST in mid 2010. Some home buyers and builders tried to get a step ahead of that tax to ensure a closing prior to the introduction of the new tax.

Multi-family home construction activity, which includes semi-detached, row and apartment dwellings, also grew in the fourth quarter but fell relatively more rapidly for the year as a whole. High under-construction levels likely increased times to completion – making it difficult to commence new projects during the year. Since 2004, apartment construction has captured a larger share of residential construction activity as first-time buyers flocked to more inexpensive housing options. However, builder financing for apartment construction has been under greater scrutiny given the size of projects and uncertainty in the marketplace since the onset of the global credit crisis. Slowing demand led to rising apartment inventories during the early part of 2009. Lower apartment starts for the remaining part of the year enabled unsold inventories in projects that were under construction and projects completed to tighten as demand rose on the strength of builder incentives and lower interest rates. This resulted in more projects breaking ground to meet increasing sales in the fourth quarter.

Slowing housing demand during the onset of the global economic crisis, well behaved construction costs combined with more competitive headwinds from the existing home market, motivated price discounting and builder incentives early last year. Since then, new home prices, particularly for low-density housing, have firmed up as demand grew into the fourth quarter. Rising construction costs and buoyant resale markets expected into the new year provide builders with room to push prices up further – helping support additional production into 2010.

Resale Market

Ontario Existing Home Sales Reach New Record

Ontario home buyers were out in full force in the fourth quarter. Ontario seasonally adjusted existing home sales grew by over 10 per cent in the fourth quarter to the highest level on record. By the fourth quarter, home sales not only returned but exceeded pre-recession levels. Home sales staged a remarkable recovery in 2009 on the strength of second half activity – growing by over eight per cent for the 2009 calendar year. Pent-up demand which built up in early 2009, low interest rates and the prospects of higher mortgage and closing costs supported buying activity during the fourth quarter.

Ontario new home listings moved higher in the fourth quarter. Home prices below pre-recession levels weighed on home listings for most of last year as homeowners pulled their homes off the market hoping for better days ahead. Despite an increasing listings trend during the last few months, the gap between sales and new listings continued to widen during the fourth quarter – indicating tighter supply conditions for prospective home buyers. Ontario's sales-to-new-listings ratio, a leading indicator of growth in future home prices, moved higher. Growth in Ontario home prices accelerated during the second half of 2009, growing well above the general rate of inflation. Prices were 10 per cent above pre-recession levels in the fourth quarter and this should motivate higher listings into 2010.

The most expensive Ontario resale markets continued to experience the tightest housing market conditions. As of the fourth quarter, Hamilton, Ottawa and Toronto experienced the tightest resale market conditions in Ontario. Improved affordability through the latter part of 2009 helped fuel demand in Ontario's most expensive markets. Meanwhile, Greater Sudbury, Windsor and St. Catharines-Niagara sustained their ranking as the coolest resale markets across the province. A high Canadian dollar and labour market challenges in the mining and automotive industries created challenges in these local housing markets.

Economic Overview

Ontario Economy Posts Growth in Third Quarter

The latest economic accounts data for the province indicates that the Ontario economy began recovering into the third quarter. Ontario real GDP grew by an estimated 1.9 per cent annualized rate in the third quarter – first quarterly gain after four consecutive quarterly declines. This rate of growth exceeded the national average. Leading economic indicators suggest the economy posted further growth into the fourth quarter – in line with the global economic recovery that was underway. Growing global demand stabilized Ontario manufacturing shipments and exports of key lumber and automotive products. In fact, Ontario's manufacturing sector posted output growth for only the first time since early 2007. Meanwhile, domestic demand grew in the third quarter

with business spending leading the way. Improved credit conditions and growth in corporate earnings was behind the renewed optimism among Ontario businesses who expect a pickup in sales, investment and employment over the next 12 months, according to the latest quarterly *Bank of Canada Business Outlook Survey*.

Employment growth and the cost of borrowing are two key ingredients feeding into housing demand. Ontario posted positive job growth in the third and fourth quarters of 2009 as the economic downturn in Canada came to an end. Ontario's jobless rate remained high as labor force participation rates also grew. Significant monetary and fiscal policy stimulus suggests job markets will continue to grow, albeit at a modest pace, through most of 2010. Interest rate sensitive domestic sectors posted stronger job growth in 2009 as a high Canadian dollar and weaker US economy dampened demand for labour in the goods sector.

Fixed rate mortgage rates were relatively stable in the fourth quarter in Canada. The Bank of Canada sets interest rates on the basis of inflationary pressures in the economy. Inflationary pressures in Canada grew on a year-over-year basis in the fourth quarter but remained below the bank's target inflation rate. On a month-over-month basis, headline prices actually declined in late 2009. Unused excess capacity, high jobless rates, a strong Canadian dollar and retail price wars suggest inflationary pressures will remain tame for most of this year. This enabled the Bank of Canada to keep overnight rates fixed in the fourth quarter maintaining their pledge that they will remain low until mid 2010. As evidence grows that global economic growth is accelerating, the appetite for risk will continue to rise. Investor demand for equities and precious metals will move higher putting upward pressure on bond yields and mortgage rates.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
